

PARAMA CRM — Feature Decision Sheet

What to show and what to hide for a simple client demo · 2026-08-18

The product has about 90 user-facing features. Most come from the open-source base (Frappe CRM). Your team built the WhatsApp inbox, the travel fields, the sales stages, and the theme on top. For a simple demo, show about 10 features. Hide the rest. You can turn any hidden feature on later.

KEEP show in the demo **OPTIONAL** show only if asked **HIDE** turn off for now **Custom** = your team built it

Keep — the core story (show these)

Feature	Show?	Why
WhatsApp Team Inbox (3 panes)	KEEP	The main product. Chat, trip details, and stage in one view.
Auto lead capture from WhatsApp	KEEP	A new number becomes a lead on its own. Strong demo moment.
Round-robin auto-assign	KEEP	New leads share out to agents. Narrate it; no screen needed.
Priority and "awaiting reply" pills	KEEP	Agents see who to answer first. Simple and visual.
Travel fields on a lead	KEEP	Destination, dates, group size, budget. Fits a travel agency.
Travel status ladder	KEEP	Proposal Sent → Negotiation → Booked. Clear pipeline.
Leads list and Kanban board	KEEP	The pipeline view. One click, easy to read.
Lead detail: Tasks and Notes tabs	KEEP	Set a reminder, write what the customer wants.
Follow-up reminders + manager digest	KEEP	Nothing is forgotten. Good for the manager story.
Notifications (bell)	KEEP	Assignments and reminders in one place.
Dashboard (number + donut charts only)	OPTIONAL	Nice for a manager. Hide the empty forecast charts.

Optional — show only if the client asks

Feature	Show?	Note
Contacts and Organizations	OPTIONAL	Useful, but adds screens. Keep it light.
Deals (separate from leads)	OPTIONAL	May confuse. One pipeline (leads) is simpler for now.
Email tab on a lead	OPTIONAL	Only if the client wants email too. Needs mailbox setup.
Calendar	OPTIONAL	Good for trip dates, but one more thing to explain.
Export to Excel	OPTIONAL	Handy, low risk. Show if asked.

Hide — turn off for a simple demo

These are powerful but add complexity. They can confuse a non-technical user. Turn them on later, one at a time.

Feature	Show?	Why hide it now
Phone systems (Twilio, Exotel)	HIDE	Needs paid accounts and setup. Not the WhatsApp story.
Call Logs	HIDE	Empty without a phone system connected.
ERPNext / accounting sync	HIDE	Advanced. Not needed for a sales demo.
Lead Syncing (Facebook, etc.)	HIDE	Extra setup and failure points.
Web form builder	HIDE	Powerful but complex. Later.
SLA policies	HIDE	Rules engine. Too much for a first demo.
Assignment rules (UI)	HIDE	Your round-robin already does this in the background.
Sales hierarchy	HIDE	For big teams. Adds a visibility model.
Data import	HIDE	We import data for the client during setup.
Layout editors (side panel, data, quick entry)	HIDE	Lets a user break the screen. Keep it fixed.
Custom actions / client scripts	HIDE	Developer tool. Not for daily users.
"Desk" and "Apps" switcher	HIDE	Exposes the raw backend. Confusing and risky.
Group-by, saved/public views	HIDE	Extra view options. Not needed to tell the story.
"Enrich from website"	HIDE	Nice, but off-topic for the core flow.
Setup wizards, welcome, trial banners	HIDE	First-run clutter. Dismiss before the demo.
Forecasting / exchange-rate settings	HIDE	Advanced dashboard config. Leave at defaults.

How to hide features

Two simple ways. We handle both during setup.

- **By role.** Give agents the "Sales User" role, not "Manager". Settings, integrations, and admin tools then disappear for them automatically.
- **By not connecting.** If we do not connect a phone system or a form, those screens stay empty and out of the way.
- **Dismiss the "Getting started" panel** before the demo, so it does not cover the screen.

PARAM CRM · Feature Decision Sheet · 2026-08-18. Feature list from a full review of the app routes, sidebar, and settings. "Custom" marks work your team built on top of the open-source base.
