

PARAMA CRM

Client Onboarding & User Manual · Version 1.0 · 2026-08-18

What this product does. PARAMA CRM turns your WhatsApp Business number into a shared team inbox. A customer messages your number. The system makes a lead, gives it to an agent, and shows the trip details next to the chat. Your team works from two screens.

To go live, you give us two things: (1) seven values from your WhatsApp Business (Meta) account, and (2) a list of your team members. We do the rest. Setup takes about one day.

Part 1 — Onboarding: what we ask from you

A. Your WhatsApp Business API details (7 values)

These come from your Meta Business account. We collect them once and enter them for you. Send them to us through our secure channel, not by normal email.

#	We ask for	Where it comes from
1	Permanent access token	Meta app → WhatsApp → API setup (a permanent token, not the 24-hour test token)
2	API URL	Normally https://graph.facebook.com (we use this default)
3	API version	For example <code>v19.0</code>
4	Phone Number ID	Meta app → WhatsApp → API setup
5	WhatsApp Business Account ID	Meta app → WhatsApp → API setup
6	Meta App ID	Meta app → Settings → Basic
7	Webhook verify token	A password you choose. We agree on it together, then set it on both sides.

Before those values can exist, you need:

1. A Meta Business account at business.facebook.com. Business verification is recommended.
2. A phone number for WhatsApp that is **not** already used in the normal WhatsApp app. The number must be free for the API.
3. A Meta developer app with the WhatsApp product added.

We set the webhook address on your Meta app during setup. You do not need to do this step yourself.

B. Your team list

- Name and email of each sales agent. New WhatsApp leads are shared out to these agents automatically.

- Name and email of the manager. The manager sees all conversations and gets a daily summary.

C. Your business content

- The destinations and packages you sell.
- Your working hours and the escalation contact.
- Your logo (optional), for branding.

What we set up on our side

We host the site, create your users, enter your WhatsApp details, connect the webhook, and run one test message end to end. The travel fields and the sales stages already ship with the product. Then we run a 45-minute training call.

Go-live test (we do this together)

1. You send a WhatsApp message from a personal phone to your business number.
2. We confirm the lead appears, an agent is assigned, and the agent gets a notification.
3. The agent replies from the Inbox. We confirm the message arrives on your phone.
4. We move the lead through the stages to "Booked".

Part 2 — Daily use: two screens

Screen 1 — The WhatsApp Inbox (your main screen)

Open "WhatsApp" in the left menu. You see three panes: the conversation list, the chat, and the customer details.

- New customer messages arrive here on their own. Each new number becomes a lead.
- The system gives each new lead to an agent automatically. Agents share the load in turn.
- Colored pills show the priority (hot, warm, cold) and an "awaiting your reply" badge. Answer the waiting chats first.
- Type in the box at the bottom to reply, or pick an approved template.
- The right pane shows the trip: destination, dates, group size, budget, stage, and owner. Update these as you learn them.
- Agents see "My inbox". The manager can switch to "All conversations".
- If a chat waits too long, the system sends a reminder. The manager gets one daily summary.

Screen 2 — The Leads board

Open "Leads" in the left menu. Every enquiry is a row or a card.

- The stages run: New → Contacted → Nurture / Qualified → Proposal Sent → Negotiation → Booked or Lost.
- Move a lead to the next stage as things change. The goal stage is "Booked".
- Open a lead to see the travel details, the full WhatsApp history, tasks, and notes.

Small helpers (learn these in week 2)

- **Tasks:** set a reminder on a lead, for example "call back on Friday".
- **Notes:** write down what the customer wants.
- **Notifications (bell):** assignments, reminders, and mentions.
- **Dashboard (manager):** counts of leads, booked deals, and lead sources.

We hide the advanced tools (phone systems, accounting sync, imports, form builders) at setup, so your screen stays simple. We can turn any of them on later.

Part 3 — Questions and problems

Problem	What to do
My reply did not send.	The WhatsApp token is expired or wrong. You see an error message. Call us. We refresh the token.
A new customer did not appear.	Check the banner at the top of the Inbox. If it says no account is connected, call us.

I cannot message a customer freely.	WhatsApp allows free replies only within 24 hours of the customer's last message. After that, send an approved template first.
I cannot see my teammate's chats.	This is correct. Agents see only their own chats. A manager can use "All conversations".

Note for the demo build. The practice site uses a fake WhatsApp key, so sending a real reply fails on it. This does not affect your live site. With your real Meta key, sending works normally.

PARAMA CRM · Onboarding & User Manual v1.0 · Prepared 2026-08-18. The 7 WhatsApp values match the fields the product stores for a WhatsApp account.
